                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Дb
                                             The invention relates to an oncogene designated PAX8-PPARgammal that contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgamman ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-pPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents a human PAX8e9(-exon 8)-PPARgammael polypeptide encoding cDNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                contains a PAX8 coding region fused to PPÁRgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents a human PAX8e9-PPARgammael polypeptide
                                                                                                                                                                                                                                                                                                                                                      1459
                                                                                                                                                                                                                                                                                                                                                                                                                        1399

                                                                                                                                                                                                                                                                   Score:
                                                                                                                                                                                                                                                                                                                       The invention relates to an oncogene designated PAX8-PPARgammal that contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgammal ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents a human PAX8e7-PPARgammael polypeptide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ₽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        23-OCT-1995;
30-JAN-1995;
07-JUN-1995;
expression of the beta-oxidation cycle enzymes. Peroxisome proliferate include unsaturated fatty acids, hypolipidemic drugs, and herbicides. PPARgamma has two main subtypes (hPPARgamma, and hPPARgamma2), which differ in their N-terminal sequences, and are expressed at high levels adipose tissue. hPPARgamma proteins repress hPPARalpha activity. The encoded proteins can be used in a cell system with a reporter gene (and optionally a hPPARalpha protein) to identify agonists and antagonists can be used as therapeutic agents. The agonists and antagonists can be used to treat obesity, diabetes, anorexia,
                                                                                                                                                                                                                                                                                                                     proliferator activated receptor gamma (hPPARgamma). This sequence encodes three different hPPARgamma subtypes, which differ in their N-terminal sequences. Peroxisomes contain enzymes for cholesterol and lipid metabolism, and respiration. Peroxisome proliferators increased capacity of the peroxisomes to metabolise fatty acids, via increased capacity of the peroxisomes to metabolise fatty acids, via increased

                                                                                                                                                                                                                                                                                                                             Score:
                                                                                                                                                                                                                                                                                                                                                                                               excessive cell proliferation and viral infection. The invention is also directed to the use of PPAR gammal and gamma2 to identify compounds that are antiproliferative, antiviral and antitumour agents. The invention also relates to a method of treating cancer using a pharmaceutical composition comprising thiazolidinedione in an amount sufficient to modulate PPAR gammal and gamma2 activity. The present cDNA sequence encodes human peroxisome proliferator activated receptor (PPAR) gammal protein related to the invention.
                                                                                                                                                                                                                                                                                                                                                                            Sequence 1434

The method can be used for identifying agonists and antagonist of nuclear receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure;

                    The invention relates to an oncogene designated PAX8-PPARgammal that contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents a human PPARgamma polypeptide encoding cDN

PPAR are orphan receptors, and may play a role in proliferative and differentiation aspects of cancer. The PPAR-gamma polypucleotide is useful for detecting a mRNA transcript that encodes PPAR polypeptide. It is also useful for detecting hybrid formation. The PPAR-gamma polypeptide is useful in diagnostics, drug

                                                                                                                                                                                                                                                                                                                                                                as multiple sclerosis, connective tissue disease, rheumatoid arthritis, disbates mellitus, allergic rhinitis, asthma and eczema, nervous system disorders such as Parkinson's disease, Alzheimer's disease, Huntington's chorea, amyotrophic lateral sclerosis, spinal muscular atrophy and Wernicke disease, inflammatory disorders such as nephritis, Crohn's disease, ischaemia-reperfusion injury, shock, sepsis and inflammatory bowel disease. The sequences exhibit activity relating to angiogenesis, cell proliferation, cell differentiation, stem cell growth factor, activin or inhibin. Therefore, they can be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to alsorders. The sequences may also be used for regeneration of bone, as a contract of the deal of the contract and then be sequenced may also be used for regeneration of bone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cancer, no

The DNA and protein sequences are useful for the treatment, diagnosis and prevention of various types of disorder in a mammalian subject such as a human, dog, monkey, mouse, hamster or rat. The disorders include cancers such as leukaemia, lymphoma and neuroblastoma, autoimmune disorders such as a human and protein a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel polypeptides and nucleic acids obtained from cDNA libraries prepared from various human tissues, for diagnosis, treatment of cancer, neurological, inflammatory disorders and for use in arrays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                07-SEP-2001
